Top-class test equipment
DUSPOL® voltage testers – the testers with the VDE mark of conformity

The international standard for voltage testers IEC/EN 61243-3 (DIN 0682-401) increases safety for work under voltage.

Your work as an expert requires safe testing. Therefore, you should not make any compromises concerning safety! Voltage testers which are used on electrical systems of up to 1000 V have to comply with the standard IEC/EN 61243-3 (DIN 0682-401). The voltage testers are divided according in voltage class A (up to AC 500 V/ DC 750 V) and voltage class B (up to AC 1000 V/ DC 1500 V). The standard creates uniform testing and safety criteria on an international level and remarkably which concentrates on user safety.

An essential safety aspect of the international standard requires that voltage testers which load the measuring point with an operating current higher than AC 3.5 mA or DC 10 mA either have to be equipped with a push button on each test probe to activate the measurement or with a protective cap in order to protect the contact electrodes against accidental contact.

All testers of the *DUSPOL®* generation of voltage testers load the measuring point by actuating the two membrane push buttons. Thus, irritating inductive and capacitive voltages can be suppressed.

A vibrating motor can be activated additionally. The vibrating power of this motor increases proportionally to the applied voltage. This is an additional indication of voltage being applied.

The *DUSPOL®* voltage tester generation underlines once again the BENNING expertise in the field of testing, measuring and safety technology. With a *DUSPOL®* voltage tester you acquire an innovative product which has been tested and approved by the independent VDE Test and Certification Institute.

The test equipment *DUSPOL®* voltage testers
